The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as a diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosis involves comparing levels of LSG in samples obtained from patient and normal control.

                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a human lung cancer specific gene (LSG), and encodes a polypeptide designated Lng104. LSGs are useful in the treatment and diagnosis of lung cancer. The treatment of lung cancer comprises the administration of a molecule which down regulates the expression of an LSG. An immune response can be mounted against a target cell expressing an LSG. Identification of potential therapeutic agents for use in imaging and treating lung cancer which comprises screening molecules for an ability to bind to or decrease expression of an LSG relative to LSG in the absence of the agent where the ability indicative of the molecule being useful in imaging and treating lung cancer which conditions of a molecule to bind to the LSG or decrease expression of the LSG is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New lung cancer -

LSGs are useful in the treatment and diagnosis of lung cancer. The treatment of lung cancer comprises the administration of a molecule which down regulates the expression of an LSG. An immune response can be mounted against a target cell expressing an LSG. Identification of potential therapeutic agents for use in imaging and treating lung cancer which comprises screening molecules for an ability to bind to or decrease expression of an LSG relative to LSG in the absence of the agent where the ability of a molecule to bind to the LSG or decrease expression of the LSG is indicative of the molecule being useful in imaging and treating lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim

                                                                                                                                                                       sequences have homology with proteins including LDI receptors. THE ligands and various enzymes. The membrane-bound proteins and receptor molecules are useful as pharmaceutical and diagnostic agents. Receptor immunoadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               18-AUG-1998

Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR CC primers for PRO polypeptides of the invention. The sequences of the CC invention can be used to detect the presence of a tumour in a mammal by CR comparing the level of expression of a PRO polypeptide in a test sample CC of cells from the animal and a control sample of normal cells, whereby a CC higher level of expression in the test sample indicates the presence of a CC tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, CC pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TMF) alpha release from human CC blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The CC stimulate the proliferation or differentiation of chondrocyte cells. The CC susceptibility to tumour development, particularly adrenal, lung, colon, CC breast, prostate, rectal, cervical, or liver tumours, in mammalian CC subjects. The oligonucleotide probes specific for the PRO nucleic acids

The PRO protein, and PRO agonists, PRO antagonists or anti-PRO annibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein belocoty, including use as hybridisation probes, and in chromosome and means marrian.

                                                                                                                                                                                                                                                                                                                                                  sequences, and their fragments, can be used as hybridisation probes, in the monosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AAF44270 to AAF4470 represent PRC primers and hybridisation probes us in the isolation of human PRO sequences. AAF44087 to AAF44269 and AAB65154 to AAB65300 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                           haematopolesis regulatory activity; tissue growth ractor activity; climbunomodulatory activity; activity or inhibin-related activity. CI immunomodulatory activity; activin- or inhibin-related activities; cc hemotactic or chemokinetic activities; haemostatic, thrombotic or thrombolytic activities; receptor or ligand activities; or may be converted in oncogenesis, cancer cell proliferation or metastasis. Compending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or amellorating medical conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions, chronic inflammatory conditions (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal repair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, incisions and ulcers), while those with abnormal fungal infections in addition to immune disorders. Polypeptides with growth factor activity may be used in cell cultures to manifeld to the cell growth. For example, such polypeptides may be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of identifying compounds which polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity;
                                                                                                                                                                                                promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autolmmune disease or accidental damage. The polypeptides and nucleotides may also be used in the disgnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a novel human polypeptide of the invention.
                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer -

CC cerebroprotective, haemostatic, vulnerary, cytostatic, antipsoriatic, cantibacterial, virucide, and fungicide activity. The proteins and cc nucleotide sequences are useful as nutritional sources or supplements cand in research. The proteins are useful for treating immune deficiency and disorders, which may be genetic or resulting from infections, cand disorders such as multiple sclerosis, systemic lupus cerythmatosus, rheumatoid arthritis, and for treating myeloid or lymphoid cerythmatosus, rheumatoid arthritis, and for treating myeloid or lymphoid cerythmatosus, rheumatoid arthritis, and for treating myeloid or lymphoid cerythmatosus, rheumatoid arthritis, and for treating myeloid or lymphoid cerythera are also useful in compositions for bone, cartilage, tendon, ci ligament and/or nerve tissue growth or regeneration, for wound healing, ci such as replacement and in the treatment of wounds, inclsions cand ulcers. Other uses include in the treatment of wounds, inclsions cand ulcers. Other uses include in the treatment of wounds, inclsions cripheral nervous system and neuropathies such as Alzhelmer's and cripheral nervous system and neuropathies such as Alzhelmer's and cripheral nervous system and neuropathies such as Alzhelmer's and cripheral nervous system and neuropathies as a contraceptive, and for treating coagulation disorders such as a contraceptive, and for creating coagulation disorders such as haemophilias. The protein and concleotide sequences with cadherin activity are useful for treating cancer. Other uses for the protein include for inhibiting the growth, cancer. Other parasites, for effecting bodily characteristics such as height, weight, hair colour, effecting bodily characteristics cycles or rhythms, effecting metabolism, catabolism, anabolism, anabolism, catabolism, sefections are alimination of distance for inhibiting the growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17-AUG-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to 59 human secreted proteins and the nucleotide sequences encoding them. Sequences AAC59788-C59846 and AAB34687-B34745 represent the proteins and their encoding nucleotide sequences, and sequences AAB34746-B34771 represent fragments of the proteins. Probes for the DNA sequences are represented by sequences AAC59847-C59596. The proteins exhibit neuroprotective, dermatological, immunosuppressive, proteins exhibit neuroprotective, dermatological, immunosuppressive,

TGC-440 has antlinflammatory, nephrotropic, immunomodulatory, virucide, hepatotropic, antiasthmatic and antibacterial activities, and can be used in vaccines. TGC-440 and the polynucleotide sequence encoding it can be used to treat, prevent and diagnose immunological, liver, kidney or gastrointestinal disorders and infectious diseases, such as hepatitis, nephritis, influenza, asthma, pneumonia, pulmonary hypertension, and Helicobacter pylori infection. An antibody immunospecific for TGC-440 is also useful in the above treatment and diagnosis, and also for quantifying the amount of TGC-440 in a liquid

The present invention describes immunogenic portions of lung tumour-
CC associated proteins (I) and the nucleic acids (NAs) that encode them.
CC (I) have cytostatic activity and can be used in gene therapy, antisense
CC inhibition and in vaccines. The NAs and the lung tumour-associated
CC diagnosis of diseases associated with their inappropriate expression,
CC diagnosis of diseases associated with their inappropriate expression,
CC especially lung cancers. For example, the NAs may be administered to
CC treat diseases by rectifying mutations or deletions in a patient's genome
CC treat diseases by rectifying mutations or deletions in a patient's genome
CC treat diseases by rectifying mutations of (I). Additionally, the
CC NAS may be used to produce the lung-tumour associated protein, according
CC to standard recombinant DNA methodology. Conversely, antisense NA
CC molecules may be administered to down regulate protein expression by
CC binding with the cells own genes and preventing their expression. The NA
CC assays to detect and quantitate the presence of similar NA sequences in
CC cassays to detect and quantitate the presence of similar NA sequences in
CC cancer. The (I) may be used as antigens in the production of antibodies
CC and in assays to identify modulators (agonists and antagonists) of the
CC expression and activity of the protein. AAF68083 to AAF6878 and
CC nucleotide and protein sequences which are used in the exemplification

AF6808 to AAB76878 represent human lung tumour protein related
CC nucleotide and protein sequences which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   17-DEC-1999; 99US-0466867.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a human secretory protein designated TGC-440. TGC-440 has antiinflammatory, nephrotropic, immunomodulatory, virucide, hepatotropic, antiasthmatic and antibacterial activities, and can be used in vaccines. TGC-440 and the polynucleotide sequence encoding it can be used to treat, prevent and diagnose immunological, lung, liver, kidney or gastrointestinal disorders and infectious diseases, such as hepatitis, nephritis, infleenza, asthma, pneumonia, pulmonary hypertension, and Helicobacter pylori infection. An antibody immunospecific for TGC-440 is also useful in the above treatment and diagnossis, and also for quantifying the amount of TGC-440 in a liquid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Secretory protein TGC440, antibodies to it and compounds inhibiting its activity for diagnosis and treatment of dimmune system, lung, kidney, liver and intestinal system

AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for C human secreted proteins expressed in prostate, and encode the proteins CC given in AAX11716 to AAX1193 respectively. The proteins given represent CC the signal peptide and an N-terminal fragment of a secreted protein. The CC nucleic acid sequences can be used for producing secreted human gene CC products. They can also be used to develop products for diagnosis and CC therapy. The proteins obtained may have cytokine activity, cell CC proliferation and differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, haematopoiesis regulating CC activity, tissue growth regulating activity, haematopoiesis and CC regulating activity, receptor/ligand activity, anti-inflammatory CC activity, tumour inhibition activity or other activities. The products CC are be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter CC sequences. The nucleic acids encoding the signal peptides can be used for colvential entry in the insertion of a polypeptide or the insertion of a polypeptid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Qy
    molecules may be administered to down regulate protein expression by binding with the cells own genes and preventing their expression. The NA and complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar NA sequences in samples, and hence which patients may be in need of treatment for lung cancer. The (I) may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of the expression and activity of the protein. AAF68083 to AAF6878 and nucleotide and protein sequences which are used in the exemplification
                                                                                                                                                                                                                           associated proteins (I) and the nucleic acids (NAs) that encode them. (I) have cytostatic activity and can be used in gene therapy, antisense inhibition and in vaccines. The NAs and the lung tumour-associated proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with their inappropriate expression, especially lung cancers. For example, the NAs may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of the activity of the cancer.
nucleotide and protein sequences of the present invention.
                                                                                                                                                              that affect the activity of the protein by expressing inactive proteins or to supplement the patients own production of (1). Additionally, the NAs may be used to produce the lung-tumour associated protein, according to standard recombinant DNA methodology. Conversely, antisense NA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  06-MAR-2000;

DEFINITION

Human DNA sequence from clone RP11-467B11 on chromosome 9, complete sequence.

ACCESSION

AL356798

VERSION

AL356798.18 GI:15795413

KEYWORDS

SOURCE

ORGANISM

Homo sapiens

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

1 (bases 1 to 118068)

TITLE

JOURNAL

CB10 1SA, UK. E-mail enquiries; humquery@sanger.ac.uk Clone

requests: clonerequest@sanger.ac.uk

On Sep 27, 2001 this sequence version replaced gi:14455883.

Where differences assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw:, reverselement.

                                                                                      sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone.
                                             will be sequenced to completion.
